Experience

Tripadvisor Mar. 2024 – Oct. 2024
Apprentice Software Engineer — Cloud & Platform Engineering *New York, NY*

- Built internal developer platform features with **TypeScript and React** for Cortex, automating service creation, resource management, and engineering workflows.
- Developed a self-service GitLab-to-GitHub migration platform with API integrations, asynchronous status polling, validation, and error handling.
- Automated AWS infrastructure provisioning and CI/CD deployment workflows using **AWS CDK** and TypeScript across monitoring, scaffolding, and migration tooling.
- Replaced file-based service-catalog workflows with bulk Cortex API submissions, helping achieve **100%** documented ownership across cataloged products.

Jefferies Group Feb. 2023 – Aug. 2023
Software Engineer Intern — Fixed Income / Trading Systems *New York, NY*

- Developed and supported Java applications for the ION Trading Platform, integrating custom APIs to improve trader workflows and system functionality.
- Built a risk aggregation application for mortgage trading desks using **Java, Spring Boot, and Kafka**, supporting the COO, CFO, and dozens of traders.
- Built an observability platform with Python, Prometheus, Grafana, Loki, and Promtail; delivered seven dashboards and critical alerts that reduced incident detection time by **60%**.
- Automated kdb+ data extraction and analysis with Python and Unix scripting, cutting analysis time by **over 85%**; helped migrate kdb+ databases to AWS EC2 and S3 for **up to 40%** faster queries.

Projects

Trackr | *Automated Job Application Tracker* GitHub | Demo

- Built and deployed a full-stack tracker using **Next.js, TypeScript**, **PostgreSQL**, and Supabase, with a Chrome extension that automatically captures applications submitted through Greenhouse, Lever, and Ashby.
- Designed an event-driven system with **append-only history**, deterministic status updates, deduplication, and undo, creating an auditable application timeline.
- Built a rules-first email classifier with Claude API fallback, achieving **92% accuracy** on held-out, hand-labeled job email; added **800+ tests** and GitHub Actions checks and builds on every push.

Soldra | *Reseller Profit & Tax Tracker* In development

- Building a SaaS that normalizes sales from six marketplaces to calculate profit after fees, shipping, and cost basis, with a **PostgreSQL** model for user-scoped data, duplicate-safe CSV imports, and cost-basis matching.
- Implemented analytics dashboards, quarterly tax estimates, year-end exports, and **Stripe billing**, with 79 automated tests covering parsers, financial calculations, billing, and tax logic. Private repository; demo available upon request.

Technical Skills

Languages: TypeScript, JavaScript, Java, Python, SQL, HTML/CSS, R
Frameworks & Data: React, Next.js, Node.js, Spring Boot, Flask, PostgreSQL, Supabase, kdb+, Kafka
Cloud & Tools: AWS (EC2, S3, Lambda, Redshift, CDK), Docker, Git, GitHub, CI/CD, Cortex
Monitoring: Prometheus, Grafana, Loki, Promtail
AI Development Tools: OpenAI Codex, Claude Code, Cursor

Education

Western Governors University In progress
Bachelor of Science in Computer Science

Year Up New York Aug. 2023
Technical Diploma in Software Development
